PREVIOUS ACADEMIC PROJECTS

Characterising Exoplanet Atmospheres

Sep 2019 - Jul 2020

Center for Astrophysics | Harvard-Smithsonian

- Worked to characterise the atmosphere of the exoplanet WASP-21b via transmission spectroscopy.
- Extensive use of Python to reduce and fit transit light curves and atmospheric models
- Work formed my master’s thesis, and was published in MNRAS

Undergraduate Observational Astronomy Project

March - May 2018

University of Southampton & Teide Observatory

- Organised 6 nights of observations for 12 undergraduate students, operating a variety of telescopes to take data for my own and other projects
- Data used to calculate the total and surface area normalised Star Formation Rates (SFR) of late-type spiral galaxies to analyse how SFR changes with galaxy spirality.
- Work presented as both a report and in a poster presentation session to PhD students and academics at the University of Southampton.

Gamma Ray Telescope Design

March 2018

Universidad de La Laguna, Tenerife, Spain

- Co-project manager of a team of eight undergraduate and masters students from University of Southampton, Universidad de La Laguna and University College Dublin, designing a gamma ray telescope to study nucleosynthesis in supernovae
- Responsibilities as co-project manager included ensuring team stuck to deadlines and preparing team for daily assessment meetings
